FIVE STRATEGIC SECTORS

essential to food sovereignty and to the energy & digital transition.

Agriculture & Water

- Developing agricultural models in favor of food sovereignty and climate resilience.
- Developing competitive non-conventional water solutions.

Social Innovation

- Developing a 'social business' platform.
- Implementing innovative social solutions to address community development challenges.

Energy

- Produce competitive green electrical energy.
- Develop solutions for the production and storage of green electrical energy.
- Develop Power to X solutions.

Chemicals

- Develop solutions and produce materials based on co-products in support of the energy transition.
- Develop carbon valorization solutions.

Digital

Develop digital innovative solutions to meet sustainability and sovereignty challenges.

OUR PURPOSE

To contribute to Morocco's technological leadership and economic sovereignty by developing technological solutions with a strong local impact.

WE HAVE AN ECOSYSTEMIC APPROACH.

We position ourselves as a bridge between universities, R&D, technology experts, industrialists, and investors.

This approach promotes collective intelligence and collaboration, and contributes to the development of efficient ecosystems for a better integration of value chains in our areas of intervention.

SUSTAINABILITY IS AT THE HEART OF OUR VISION.

By contributing to a swifter transition to a zero-carbon emission, creating a positive impact on our communities, acting as a responsible partner, and caring for our people, we commit to a better, more sustainable, and inclusive future.
